Top Value Country Selection Strategy for Major Equity Markets	78

Recent Developments & Outlook

Global equities extended their strong performance from the first three months into the second quarter 2023. The cap-weighted MSCI World Index (ND) advanced another 7.1 % in local currencies, 6.8 % in US dollars and 6.4 % in euros, bringing its six-month total returns to the mid-teens regardless of currency. The MSCI World Index (December 1969 = 100) now stands at LC 7,180, \$ 9,191 and € 4,470.

With the exception of the emerging markets, value indices have continued to underperform last quarter. Large-cap markets have become ever more expensive, as shown by the KAM Equally Weighted World Index, which now trades at a valuation discount of 39 % to the cap.-weighted MSCI World Index. This year's superior performance of the MSCI World Index is entirely owed to its multiple expansion and not to rising earnings: While the underlying earnings of the global equity benchmark declined by 3.2 % in the first half 2023, its price-to-earnings ratio increased by 18.9 % to 20.3. This does not make sense under normal circumstances and much less so in a period of rising interest rates! This year's underperformance of value turned out to be a significant handicap for value-oriented equity portfolios and our **Top Value Strategy**, which now have lost a large part of their outperformance from the previous year.

The euro gained 0.4 % vs. the US dollar in the second quarter and now stands at 1.0910, up 2.2 % from its year-end 2022 level of 1.0673.

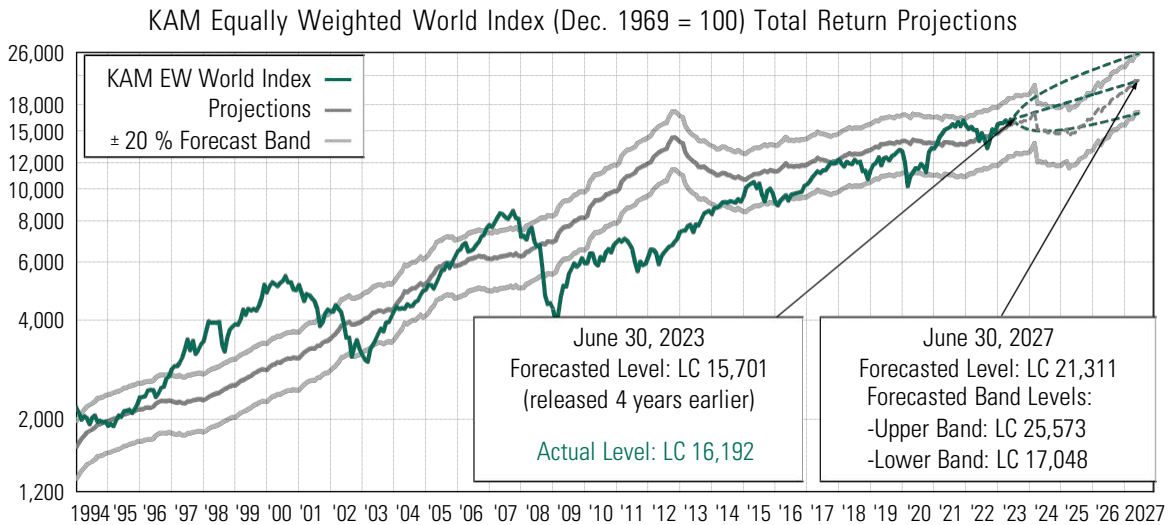

Fifteen markets included in the MSCI World Index advanced last quarter. Eight markets were down. The best-performing markets in the second quarter were Japan (+15.6 %), the United States (+8.6 %) and Italy (+7.8 %), while Finland (-8.5 %), Belgium (-6.5 %) and Hong Kong (-5.2 %) performed worst. Year-to-date, nineteen markets advanced and four markets declined. The best-performing markets in the first six months were Ireland (+23.9 %), Japan (+23.8 %) and Italy (+21.4 %), while Finland (-10.4 %), Hong Kong (-7.0 %) and Belgium (-2.4 %) declined most. Performance is in local currencies unless mentioned otherwise.

The **Top Value Model Portfolio** based on our **Top Value Strategy** (December 1969 =100), using the most attractively valued MSCI country indices as hypothetical investment vehicles, finished the second quarter at LC 61,100 (+3.7 %), \$ 41,770 (+3.0 %) and € 20,313 (+2.5 %), underperforming the benchmark by between 3.4 and 3.9 percentage points, depending on the currency. However, the **Top Value Model Portfolio** matched the MSCI World Value Index in the second quarter and outperformed it year-to-date by 5.3 percentage points in euros. For details on the recent performance of national MSCI indices, benchmarks and strategies in local currencies, US dollars and euros, please see page 6. There was no change in the composition of the **Top Value Model Portfolio** last quarter. It holds the eight "Buy"-rated markets Austria, Germany, Hong Kong, Italy, Japan, Norway, Spain and the United Kingdom. According to our analyses, an equally weighted combination of these markets offers the highest expectation of long-term risk-adjusted performance.

The following table shows how key valuation measures and rates of return of the **Developed Markets Top Value Model Portfolio** currently compare with those of selected global equity indices.

	Valuation Ratios			Rates of Return (%)		
	PBV	PCF	PE	DY	CFRoE	RoE
Developed Markets Top Value Portfolio	1.25	5.9	10.1	4.12	21.4	12.4
MSCI World Index	3.00	13.6	20.3	2.00	22.1	14.8
MSCI World Value Index	1.89	9.1	14.1	3.25	20.8	13.5
MSCI World Growth Index	6.40	22.4	33.9	0.87	28.6	18.9

The chart below shows our entire real-time forecasting history for the KAM EW World Index, starting at the end of 1993.

Now our three-to-five-year projection places the KAM EW World Index at LC 21,311 by June 30, 2027. This corresponds to a compound annual total return estimate of 7.1 % in local currencies—up 0.5 percentage points from three months ago. The upper-band estimate of LC 25,573 by June 30, 2027 implies a compound annual total return of 12.1 % (up from 11.6 % three months ago), while the lower-band estimate of LC 17,048 indicates a compound annual total return of 1.3 % (up from 0.9 % last quarter).

Expected Total Annual Returns in Local Currencies in the Next 3-5 Years (%)

While the average developed market—as measure by the KAM EW (EW) World Index—is now undervalued by 39 % compared with the cap-weighted MSCI World Index, the **Top Value Model Markets** are undervalued by 54 % compared to the MSCI World Index, by 64 % compared to the MSCI USA Index and by 76 % compared to the MSCI World Growth Index. Please see pages 8, 66 and 68 for details and pages 72-77 for our 53-year risk/return analyses.

Appendix

The terms "The World" and "...relative to the World" refer to the market-capitalization weighted MSCI World Index unless otherwise specified.

Figures in italics are estimates. All estimates are based on the historic growth rates of book value, cash flow and dividends. Multipliers based on long-term relationships are then applied to arrive at future index levels. Final estimates are derived from interdependent comparisons of all markets included in our developed markets universe, based on absolute, relative and historic relationships of their valuation.

Analyses in Local Currencies

Charts

Total Return Index, Price Index & Relative Strength versus the World

The indices are based on the monthly returns of each national market as reported by Morgan Stanley Capital International (MSCI) Perspective. Total return indices are calculated with gross dividends reinvested. Relative strength versus the World is defined as the specific regional, national or strategy total return index in local currency divided by the world total return index in local currencies. Indices are charted going back at least 84 months, and always rebased to 100 on the corresponding past December 31 (8 years back).

Absolute Valuation

Ratios are based on current price indices and reported 12-month trailing fundamentals.

- PBV (Price-to-book value ratio)
- PCE (Price-to-cash flow ratio)
- PE (Price-to-earnings ratio)
- PD (Price-to-dividends ratio)

Valuation Relative to the World

Regional, national and strategy valuation measures are expressed as factors of the valuation of the World Index. In the case of "The World" (page 8) valuation measures relative to history (7-year average) are shown.

Annual Growth (%)

Growth is defined as the annual percentage growth rate of book value, cash earnings, earnings, and dividends.

Foreign Exchange Rate

U.S. dollars denominated in local currency units.

Tables

3 to 5-Year Return Projections

- Expected Index Gain p.a. (compound annual rate of index change over the next 3-5 years)
- Expected Total Return p.a. (compound annual total index return over the next 3-5 years)
- Expected 3 to 5-Year Index Gain (cumulative rate of index change over the next 3-5 years)
- Expected 3 to 5-Year Total Return (cumulative total index return over the next 3-5 years)

Index High/Average/Low

Each annual figure is based on 12 end-of-month observations.

Earnings, Cash Flow, Book Value, and Dividends per Index Unit

For the past, end-of-year numbers or 12-month-to-date (12 MTD) numbers are shown for each index unit.

Average Price/Earnings, Price/Cash Flow, Price/Book Value Ratios and Average Dividend Yield

Annual averages are expressed as the arithmetic average of 12 monthly observations.

Average Dividend Payout Ratio, Average Return on Equity, and Average Cash Flow Return on Equity

Annual averages are expressed as the arithmetic average of 12 monthly observations in percent.

Annual Earnings, Cash Flow, Book Value, and Dividend Growth

Annual numbers are calculated as the year-to-year rates of change in percent.

Average Annual Historic Growth (Last 3/5/10 Years)

Growth is defined as the arithmetic average of rolling one-year rates of change over the last 3, 5, and 10 years.

Quarterly Earnings/Cash Flow/Dividends per Index Unit:

Quarterly figures are based on the reported trailing 12-month history of all companies included in each national market index.

Analyses in U.S. Dollars

Local currency numbers are converted into U.S. dollars at the end of each month.

Charts

Total Return Index, Price Index & Relative Strength versus the World

The indices are based on the monthly returns of each national market as reported by Morgan Stanley Capital International Perspective. Total return indices are calculated with gross dividends reinvested. Relative strength versus the World is defined as the specific regional, national or strategy total return index in U.S. dollars divided by the world total return index. Indices are charted going back at least 84 months, and always rebased to 100 on the corresponding past December 31 (8 years back).

Cash Flow Return on Equity, Cash Flow Return on Equity Relative to the World

Cash Flow Return on Equity is defined as Cash Flow divided by Book Value multiplied by 100. The Cash Flow Return on Equity Relative to the World shows the specific return as a multiple of the Cash Flow Return on Equity of the World.

Tables

Index High/Average/Low

Each annual figure is based on 12 end-of-month observations.

Earnings, Cash Flow, Book Value, and Dividends per Index Unit

End-of-year numbers and 12-month-to-date (12 MTD) numbers are shown for each index unit.

Relative Price/Earnings, Rel. Price/Cash Flow, Rel. Price/Book Value Ratios and Rel. Dividend Yield

Annual and 12 MTD averages are expressed as the arithmetic average of 12 monthly observations for the specific series versus the corresponding series of the World Index.

Foreign Exchange Rate, Market Capitalization, GDP

The series shown are end-of-calendar-year and end-of-last-month figures, respectively. The market capitalization and the gross domestic product for each regional/national market are expressed as a percent of the world figures. We do not forecast economic developments.

Annual Earnings, Cash Flow, Book Value, and Dividend Growth

Annual numbers are calculated as the year-to-year rates of change in percent.

Average Annual Historic Growth (Last 3/5/10 Years)

Growth is defined as the arithmetic average of rolling one-year rates of change over the last 3, 5, and 10 years.

Quarterly Earnings/Cash Flow/Dividends per Index Unit:

Quarterly numbers are based on the reported trailing 12-month history of all companies included in each national market index.

Introduction to the first edition:

Top Value Strategie zur Länderauswahl für die Hauptaktienmärkte

Zu den allgemein anerkannten Argumenten, Wertpapier-Portefeuilles international zu diversifizieren, gehört die aus der Geschichte gewonnene Erkenntnis, daß bis heute keine Nation der Welt in der Lage war, eine politische und wirtschaftliche Spitzenstellung über längere Perioden aufrechtzuerhalten. Horaz schrieb in seiner *Ars Poetica* im letzten Jahrzehnt vor unserer Zeitrechnung: »Viele, die heute in Ungnade stehen, werden ihr Ansehen wiedergewinnen und viele andere, die heute hohes Ansehen genießen, werden in Ungnade fallen.« Dies bestätigte sich in den letzten zwei Jahrtausenden, und damit dürfte er auch im nächsten Jahrtausend recht behalten. Die Anwendung seiner Erkenntnis auf internationale Investments wird in zahlreichen Studien dokumentiert: Über längere Anlageperioden verringern global diversifizierte Aktien-Portefeuilles das Anlagerisiko und erhöhen gleichzeitig den Ertrag im Vergleich zu heimischen Portfolios.

Unsere Investmentanalysen zeigen, daß die internationalen Aktienmärkte gemessen an lokalen Aktienindizes dazu tendieren, über einen Zeitraum von drei bis fünf Jahren um ihren inneren Wert zu oszillieren, der durch quantitative Substanz- und Ertragswertanalysen näherungsweise bestimmt werden kann. Investiert man in Märkte, deren Aktien im Vergleich zu ihrem inneren Wert zu einem Discount gehandelt werden und verkauft diese, wenn sie über ihren langfristigen Gleichgewichtskursen notieren, ist es möglich, ein besseres Anlageergebnis zu erzielen als mit einer Kauf-und-Halte-Strategie. Basierend auf dieser Erkenntnis haben wir objektive Entscheidungskriterien zur Strukturierung global diversifizierter Aktienportefeuilles entwickelt, die im Vergleich zu nationalen Aktienanlagen oder zu einem Weltaktienindex weniger riskant sind, zugleich jedoch einen höheren Erwartungswert in bezug auf die Gesamtrendite aufweisen.

Die philosophischen Grundlagen für unsere Anlagestrategie sind am besten in dem Investment-Klassiker *Security Analysis* (Wertpapieranalyse) von

Graham und Dodd beschrieben. Wir konnten durch unsere eigenen Arbeiten die Erkenntnisse, welche die beiden Professoren für den amerikanischen Kapitalmarkt gewonnen haben, für die internationalen Aktienmärkte bestätigen: Aktienanlagen in einer Kombination von unterbewerteten Märkten (siehe Seite 5, *Top Value Strategy*) weisen einen höheren Erwartungswert in bezug auf die Performance auf als ein Investment in einem Weltaktienmarktindex. Demgegenüber rentieren Aktienanlagen in überbewerteten Märkten im Vergleich zu einem globalen Aktienindex nur unterdurchschnittlich.

Wie bei allen Anlagestrategien ist die Gretchenfrage: Was bleibt dem Anleger von dem Performance-Vorteil durch aktive Marktselektion nach Abzug aller Spesen und Gebühren übrig? Für globale Aktienanlagen hängt die Beantwortung dieser Frage in hohem Maße von den Kauf- und Verkaufsspesen ab. Da die durchschnittliche Halteperiode für Anlagen in einem bestimmten Markt in einem auf Basis der Top Value Strategie konzipierten Portefeuille bei rund zweieinhalb bis drei Jahren liegt, wird die Gesamtrendite durch die Spesen kaum verschlechtert. In den letzten fünf Jahren lieferte die Top Value Strategie im Jahresdurchschnitt eine im Vergleich zum Weltaktienindex von Morgan Stanley um mehr als 10 % höhere Gesamtrendite vor An- und Verkaufsspesen, die wir auf 1-2 % p.a. veranschlagten.

Major Markets – Top Value Country Selection Strategy ist eine vierteljährlich erscheinende Publikation, ergänzt durch eine monatliche Kurzausgabe, mit der wir unsere Kunden über Änderungen unserer Einschätzung der bedeutendsten nationalen Aktienmärkte informieren. Sie soll eine Hilfestellung für den Aufbau breit diversifizierter globaler Aktien-Portefeuilles bieten, gleichgültig, ob diese aus einzelnen Wertpapieren, Länderaktienfonds oder derivativen Aktienprodukten wie z.B. Index-Terminkontrakten, Optionen und Swaps bestehen.

Top Value Country Selection Strategy for the Major Equity Markets

Among the generally accepted reasons for taking a global perspective in investments is the historical fact that no nation can maintain economic and political pre-eminence ad infinitum. Horace, who, in his *Ars Poetica*, predicted, "Many shall be restored that now are fallen and many shall fall that now are in honor," has proved to be right over the last 2000 years and will probably be equally right for the next millennium. Studies have shown that, regardless of the investor's national market and currency, global equity portfolios, over longer periods, offer higher returns at lower risk than investments in national markets.

Our research shows that over 3-5 year periods the major national equity markets tend to oscillate around equilibrium value levels which can approximately be determined by quantitative analyses of the underlying fundamentals. By entering markets when they sell at a discount to their intrinsic value and exiting them when they sell at a premium, it is possible to achieve higher returns than by following a buy-and-hold strategy. Based on this recognition, we developed objective criteria for structuring globally diversified equity portfolios which carry less risk and have the potential for higher returns than domestic equities or a buy-and-hold portfolio of the MSCI World Index.

The philosophical foundation of this analysis is best described in the original 1934 version of the seminal work *Security Analysis* by Benjamin Graham and David L. Dodd. Our research confirms that the findings of Graham & Dodd for the U.S. capital markets also apply to the global equity markets: A combination of undervalued national equity markets (see Top Value Strategy on page 5) has a higher expected rate of return in comparison to the MSCI World Index, while a combination of overvalued equity markets is expected to yield below-average returns.

As with all investment strategies, the key question is: How much of the value added through active market allocation can be brought to the bottom line in the real world of investing? For global equities, the answer depends largely on the transaction costs necessary to carry out the investment strategy. With

our Top Value Strategy, the expected holding period of investments in each national market is 2 1/2 to 3 years. Most of the value added should, therefore, be reflected in the bottom line of a real-time portfolio constructed on the basis of this strategy. Over the last five years, the Top Value Strategy has provided an annual performance advantage over the MSCI World Index in excess of 1000 basis points before transaction costs, which are estimated at 100-200 basis points per year.

Major Markets - Top Value Country Selection Strategy, a quarterly publication with monthly updates, informs clients of changes in the evaluation of each national equity market. It is designed as a tool for constructing broadly diversified global portfolios consisting of individual stocks, national equity index funds, closed-end equity country funds, or global equity derivatives, e.g. index futures, options and swaps.

We hope you will find this information helpful in reaching your investment objectives.
